

# PARTNER WITH AZEK TO MAKE YOUR BUSINESS GREENER

## Easy, effective, no-cost PVC Recycling

Traditionally, when a piece of decking is trimmed off or when siding and trim is cut to fit, the scraps are thrown away. Now, The AZEK Company is changing all of that with our FULL-CIRCLE PVC RECYCLING® Program. Using our innovative product technology, expansive network of professionals, and our vertically integrated recycling capabilities, we collect scraps directly from construction and job sites and reprocess them into brand new decking, siding, cladding, and trim.

To learn more about The AZEK FULL-CIRCLE RECYCLING Program, about getting set up with scrap PVC collection bins at your business or to inquire about program availability in your region, please reach out to a member of our team by using the contact information below:

Participation in the AZEK FULL CIRCLE RECYCLING® Program is dependent on compliance with program guidelines. This includes proper management and usage of bins in accordance with AZEK standards which includes agreement that only PVC scrap materials will be collected in bins (i.e. no trash or debris).

## Partner with AZEK to make your business Greener

### Get Started Today

Support, offer, and collect AZEK scrap PVC collection bins at your facility to make it easier for your customers to participate in green sustainability initiatives, reduce environmental impact, and lower landfill costs.

- Reduce your customers' disposal fees
- Promote green recycling initiatives across your marketing materials
- Make an environmental impact in your market
- Increase contractor traffic at your business as a recycling drop-off location
- Deliver recycle collection bins to job sites to grow awareness and reputation

## The PVC Scrap Collection Process

1.

AZEK and your local distribution partner ship reusable and collapsible recycle collection bins to your lumberyard or dealer location.

2.

Local dealers serve as collection points for scrap PVC material. Collection bins are easily transported to local job sites if needed.

3.

After collection bins are full of PVC scrap at your dealer location, contact AZEK to set up bin return and transportation.

4.

AZEK will work with distribution partners to coordinate pick up of filled bins. Transportation will take the scrap PVC material back to AZEK to be recycled into new products.

## About the AZEK scrap PVC collection bins

- Fill bins with scrap PVC building materials at your local facility or at a job site
- Acceptable scrap includes PVC deck scrap, PVC trim scrap, PVC siding scrap and rigid forms of PVC like pipes or siding
- Bins CANNOT be used to collect regular trash (including wood, metal, and paper) as that would contaminate the recyclable material
- Bin measurement: 48" x 45" x 34"
- Average full bin weight: approximately 500 lbs
- Collapsible bins fold flat when not in use
- Filled bins are stackable to save space in lumberyard and in transport
- Actual collection bins and signage are completely recyclable at the end of their useful lives
